Summary of Qualifications

Software Engineer with 2+ years of experience building scalable backend systems and applied AI features, including RAG-based chatbots. Strong background in API design, serverless architecture on AWS, and high-throughput data pipelines processing hundreds of thousands of requests daily.

Technical Skills

Programming Languages: Python, JavaScript, SQL, TypeScript

Libraries/Frameworks: Django, DRF, FastAPI, Express.js, ReactJs, Node.js, Langchain

Databases: PostgreSQL, MongoDB, Redis

Tools: PyCharm, Visual Studio Code, Git, Linux, Postman, Docker, AWS

Education

Chandigarh University 2024 – 2026
Masters of Computer Applications

Magadh University 2020 – 2023
Bachelor of Computer Applications

Experience

Software Engineer Noida, India
Befisc Nov 2024 – Current

- Developed and maintained backend services using Python, Django, and FastAPI, deployed on Linux servers, handling 100K requests/day.
- Developed serverless APIs on AWS Lambda, serving 400K+ requests per day with high reliability while reducing infrastructure overhead, operational costs, and development time.
- Built an automated web scraping solution using Python, Selenium, and BeautifulSoup, extracting 100K+ records daily for large-scale data collection.
- Built a batch processing system for bulk file uploads using S3, parallel processing, and a job queue that automatically assigned jobs to available servers, improving resource utilization and processing efficiency.
- Built a RAG-based chatbot leveraging document ingestion, vector search, and LLM inference, significantly reducing support ticket volume by automating responses to common user queries.

Software Engineer Mohali, India
Creative Buffer Aug 2023 – Oct 2024

- Developed end-to-end features for Python and Django-based web applications, handling backend logic and integrating APIs with the frontend using React.js.
- Designed and deployed RESTful APIs using Django REST Framework with authentication, permissions, serializers, and viewsets.
- Worked with Redis and AWS OpenSearch to enable high-performance search and caching across distributed services.
- Deployed applications to VPS servers, configuring Nginx + Gunicorn, HTTPS, and domain routing for production readiness.

Awards and Accolades

- 2023 — Grand Prize Winner — [Linode + DEV Hackathon](#) 🔗
- 2022 — Top Winner out of 60 — [Linode + Hashnode Hackathon](#) 🔗
